ZIP CODE DIRECTORY

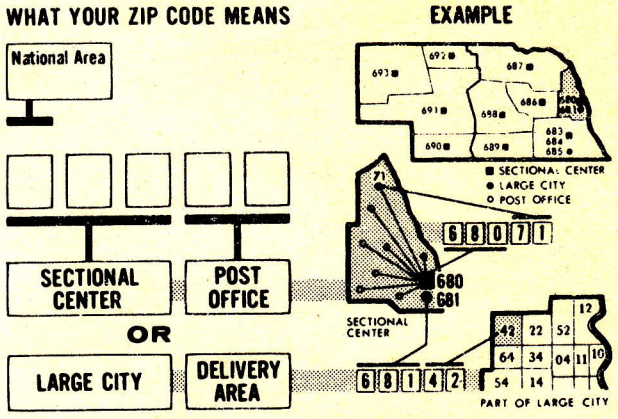

U.S.MAIL

HOW ZIP CODE WORKS

ZIP Code is a five-digit geographic code that identifies areas within the United States and its possessions for purposes of simplifying the distribution of mail by the U.S. Postal Service. It should appear on the last line of both the destination and return addresses of mail, following the name of city and State.

In devising the ZIP Code, the United States and its possessions were divided into 10 large geographic areas. Each area consists of three or more States or possessions and is given a number between 0 and 9. This is the first digit in any ZIP Code number.

Because of favorable transportation facilities, key post offices in each area are designated as sectional centers. Each sectional center post office receives and transmits mail moving *between post offices within its section*. It also receives and transmits all mail moving *into or out of the section*.

Together, the *first three digits* of any ZIP Code number stand for a particular sectional center or a metropolitan city.

The last two digits of a sectional center ZIP Code number stand for one of the *associated post offices* served by the sectional center.

The *last two digits* of a metropolitan city ZIP Code stand for one of the delivery areas served by the city post office, its branches and stations.

This publication contains the Zip Codes for all single-coded Post Offices of the States of Pennsylvania (ZIP CODE ABBREVIATION—PA.), New Jersey (ZIP CODE ABBREVIATION—NJ.) and Delaware (ZIP CODE ABBREVIATION—DE.)

You will note in the Alphabetical listing of the Post Offices in PA. and NJ. that there is a notation "see appendix." (this denotes a Post Office which has several Zip Codes and is known as a multi-coded office). Only those Post Offices listed below have been included in this publication as appendices.
